

# Introduction to Pain Management

## Why

- “Pain is one of the main reasons why people seek healthcare” *(Reznick, Rehm & minored, 2001).*
- “Pain has been identified as an unpleasant and emotional experience associated with actual or potential tissue damage” *(International Association of the Study of Pain (IASP 2014).*
- Nursing is a science and an art, the essence of which is caring for and respecting human beings, including those experiencing pain.
- Therefore, this emphasises the need for nurses to accurately assess and provide comprehensive and specific care for each individual patient.

## Workshop

Cost: R1200

## What

- Functional neuroanatomy
